

# Improving MRF profitability: MRF health check service

Axion Consulting and 360 Environmental have developed a new service, drawing on the skills and experience of senior managers in both companies, to create a useful 'health check' for MRFs. This service will enable MRF operators to identify opportunities to optimise performance and increase profits.

We know that a MRF is not simply a collection of plant and equipment which just needs to be switched on to make it do the waste sorting and separation task. The efficient day-to-day operation of a MRF only happens if the managers and operators running the process are themselves working as an orderly team within well defined procedures and management systems. The interaction between the 'people' and 'plant' is a key element of how well the overall MRF system performs.

The health check service is a fast, low risk tool to enable owners and managers of MRF facilities to obtain an independent performance assessment of the main business areas.

## What is included?

Your MRF health check will review and assess:

- Management objectives
- Key performance objectives
- MRF business strategy
- Key staff roles
- Main commercial contracts
- Material mass balance
- Equipment
- Plant control systems
- Problem 'hot spots'
- Input and output market values
- Gross margins

## What will you find out?

Our report to you will cover:

- Key findings and observations
- Identification of main problems
- Strengths and weaknesses
- Data gap analysis
- Critical issue analysis
- Key opportunities
- Implementation plan
- Prioritised 'to do' list
- Costs estimates for next steps

We will conduct a rapid overview of the way the MRF is performing during a two day site visit with two of our senior waste management experts.

Do you think your MRF operation would benefit from this service?

We have structured the 'health check' to enable you to discover potential

improvements with a low investment of your time and money.

Please contact us for more information about the MRF health check or to arrange a visit.

## Who is 360?

360 Environmental is an independent team of waste management experts. Specialists in helping companies understand and comply with waste permitting and waste planning issues, and WEEE and batteries compliance. This enables optimisation of waste and recycling activities and avoiding potential prosecution by ensuring compliance with all areas of waste legislation through training and audits.

360 Environmental can carry out comprehensive evaluations of waste operations including:

- management functions;
- process optimisation;
- profit maximisation; and
- legislative compliance.

## Who is Axion?

Axion Consulting develops and optimises processing and collection methods to recover value from waste resources for a wide range of clients within the recycling and process industries.

Axion designs and builds innovative process plants for companies in the recycling sector, advising on plant design and equipment selection.

We have a team of enthusiastic process engineers and project managers that can draw on extensive experience in the recycling and process sectors with special expertise in mixed waste plastics and biofuels.
